Subject: Yerington FMS B&C ponds

;

Dante,

Currently the FMS Pond C fluid elevation is approximately 1.56 feet higher than the FMS Pond B fluid level. In keeping with the agreed OU-8 FMS operational management goal of maximizing the FMS Evaporation ponds B & C potential evaporation we typically maintain Ponds B and C at equal levels within their capacity as a part of normal site O&M operations. If you agree, ARC can begin to divert the current Phase II/III drain down from Pond C to Pond B to level the Ponds out.

Please confirm how EPA would like us to proceed.

Thanks,

-jack
